STANTA 245B (I pour VEM)

MCEVIMENTO: grand volte

4 veller 
$$A = (\alpha_0, \alpha_1, \alpha_2, \alpha_3)$$

$$= (\alpha_1, \alpha_2, \alpha_3) = (\alpha_1, \alpha_2)$$

$$= (\alpha_1, \alpha_2, \alpha_3) = (\alpha_1, \alpha_2)$$

not relation large 
$$x$$
:  $\vec{V} = V_x \hat{x}$ 
 $V = V_x \hat{x}$ 

$$\lambda = \frac{\sqrt{1-\beta_s}}{\sqrt{1-\beta_s}}$$

$$\lambda = \frac{1}{\sqrt{1-\beta_s}}$$

$$\lambda = \frac{1}{\sqrt{1-\beta_s}}$$

$$\lambda \to c$$

4. When persone odle spare tupe 
$$X = (ct, x, y, z) = (ct, x)$$

$$\begin{cases}
ct' = y (ct - \beta x) \\
x' = y (x - \beta ct)
\end{cases}$$

$$\begin{cases}
y' = y \\
z' = z
\end{cases}$$

Je 
$$\beta \ll 1$$
:

$$y = \frac{1}{\sqrt{1-\beta^2}} = (1-\beta^2)^{\frac{1}{2}} \approx 1+\frac{1}{2}\beta^2$$

$$\Rightarrow x' \approx \left(1+\frac{\beta^2}{2}\right) (x-\beta ct) = x-\beta ct + \frac{1}{2}x - \alpha \beta^2$$

$$\Rightarrow x' \approx x - \beta ct = x - \frac{y}{c}ct - x - yt$$
but clause
$$cx (Cable)$$

Stein coin par ct:

$$ct' \approx \left(1+\frac{\beta^2}{2}\right) (ct-\beta x) = ct - \beta x + \frac{1}{2}ct + \alpha \beta y$$

$$e t' = t - \frac{\beta x}{c} = t - \frac{\beta (y)^{\frac{1}{2}}}{2} = t - \frac{\beta^2 x}{2}$$

$$\Rightarrow t' = t - \frac{\beta x}{c} = t - \frac{\beta (y)^{\frac{1}{2}}}{2} = t - \frac{\beta^2 x}{2}$$
Noter con ca boot lungs x allows  $\begin{cases} y' = y \\ z' = t \end{cases}$ 

To given par toll x directing generics
$$\begin{cases} ct' = y(ct - \beta xy) \\ x' = y'(xy - \beta ct) \end{cases}$$

$$\begin{cases} ct' = x(xy - \beta ct) \\ x' = x' \end{cases}$$

$$\begin{cases} x' = x' \end{cases}$$

$$L = L(\beta) = \begin{cases} \gamma - \beta \gamma \\ -\beta \gamma \end{cases}$$

$$dit(L(\beta)) = \gamma^2 - \beta^2 \gamma^2 - \gamma^2 (1 - \beta^2) =$$

$$= \left(\frac{1}{\sqrt{1-\beta^2}}\right)^2 (1 - \beta^2) = 1$$

$$\forall \beta!$$

or e un shrore relle spors-terro!
